Hello {{lead.First Name}},

Hose failures rarely happen in convenient places. They happen **in the field, under pressure**, where downtime costs time and money.

At Gates, we believe you don’t lower standards just because you’re in the field.

That’s why we’re making professional hose replacement easier to take with you. With the **MCX10™ portable manual crimper**, high-quality hose assembly is no longer tied to the workshop.

Compact, easy to carry and simple to operate on site, MCX10™ supports reliable replacement exactly where they’re needed - without added complexity or compromise. Because when failures happen in the field, your equipment should be ready to move with you.
